

When only the best is good enough:

Triax headend and multiswitches were selected as the quality solution

Task

Suwaira Palace Luxury Apartments is a luxurious residential building in the Kingdom of Bahrain and developed by one of the country's leading real estate owners Mr. Waleed Kooheji. In the spirit of the owner, quality materials and reliable brand products have been selected throughout the building. The result is an apartment building with a unique relaxing and tasteful atmosphere.

In this environment all technical systems needed to be absolutely reliable and provide users with lots of options. The SMATV system was no exception.

Suwaira Palace has 13 floors and 96 apartments with an excellent view of the sea and Manama city. Facilities in the building include 2 swimming pools, 2 gyms and a coffee shop. The TV system should include 240 outlets and give users an almost unlimited freedom of choice.

Process

The combined system was designed and installed by Yousif Awadi Group in cooperation with Triax.

"The system was installed several months before the building was completely finished, and it was installed without any problems or difficulties", says Mr. Venugopal from Yousif Awadi Group. "We have been in the business a long time, and our customers trust us. Selecting a reliable and easily accessible system is important, as we have to satisfy our customers 24 hours a day, 7 days a week, year in and year out. Our long experience with Triax products has given us the confidence we need to highly recommend these to our customers. We need reliability and trouble-free installation, and Triax provides it." says Mr. Venugopal.

Solution

Suwaira Palace developers selected a solution that combines the advantages of a headend based and a multiswitch based system.

Triax TCH Headend is used to distribute 32 free-to-air channels to all outlets. It is a highly reliable, modular system and provides all the flexibility and ease-of-maintenance needed in a modern building.

As an add-on, each floor has been fitted with a TRIAX TMS Multiswitch. This enables tenants to install their own set-top box and have access to all channels available from Arabsat and Nilesat, including radio channels and any pay-TV service. The multiswitch also amplifies signals, and a switch on each floor ensures high quality signals.
